Dear Sir;

About a year ago I read the book entitled, "Are Flying Saucers Real," and since then have read every available publication that I could obtain from the library on subject. This wasn't as much as I wanted, apparently there isn't any great interest on the part of most librarians to stock books on this subject.

My husband works for a company that transfers him fairly often and it was during one of these moves, when we were en route from Kingston N.Y. to Arlington Virginia, that we spent a few days vacation with relatives in Columbus Ohio. While there we saw the following.

1964 2.
Aug 30, about 8:30 PM my husband, children and I saw something unexplainable moving in the sky. It resembled a short illuminated caterpillar. At first sight it moved from left to right, separating into three spheres, hovering, coming together again ^{moving} to the left again. This was repeated several more times, last we saw of it, it was moving to the left and out of sight. I hope this will be of some help to you.

We would appreciate any material you have on this subject and would gladly pay any fee or postage that would be necessary.

Sincerely yours,
Phyllis Waddell
