NORTHWESTERN UNIVERSITY

Dear Sir:

Please, may I add my knowledge of "flying saucers" to your list?!!

In 1948 - about 3 miles east of Richland, Washington (Plutonium) a flying saucer hovered above a telegraph pole (now this, in ratio, to my position, just stepping out of a car) seemingly about 10 feet above the pole - it was about 3 P.M. - the day still, clear blue sky - after I saw it, on an angle position, how much sooner it arrived I do not know, it was just there just rather floating - in a twinkling it arose - abruptly, made a straight right and please explain this?? (we three people had and have excellent eyesight. I admit I was younger then.. 40 yrs. - anyway - in this clear sky - no clouds, the object seemed to disappear, immediately - no trace!! A plane one can see in a distance, this has bothered all of us because it was there, black and clear, we stood watching it as it hovered for about 4 or 5 minutes.

The three weeks following on Mothers Day six of us were on our lawn and my husband looked up - there high, high, above were four objects "standing still"!! and silvery - in a few minutes they scattered in four directions.

Several months later in Pasco, Washington 10 minutes from Richland one swooped down between two apartments, two boys 8-10 ran into the house from the apt. balcony screaming they were there. An article in the Pasco and Walla Walla paper was published concerning it.

The softest feathery whirr sounded from the one close that afternoon, just for a space of a few seconds - in January, about 4 A.M. (this year) that same sound awakened me, (no dream, I looked at the clock on a table.. - I thought for a second I'd go out and look at it but on second thought it as too dark. No planes sound soft this was north and west of Tulsa in the city limits. The few seconds after it passed (each time) no noise is or was heard, just silence.

I have no connections, factions, faith - of any one side of the issue - just happened to read the "POST article believe me from where I stood- they're there!!

The "thirty foot diameter" mentioned in your article is the same size as the one first mentioned (at 3 P.M.) - approximately.

A friend of my husbands, Lackheed Co. - Cal saw one on the ground - no one believed him, but (here we go again. - us! and the other four people I mentioned. He was a Manager - an excellent engineer and above reproach on authority in his job and a gentleman.

Just thought I'd write a note to help out on the angle from divers places across U.S. "They are real and not a Myth.

Sincerely,
Jeanne Crockett
